

Evidence-Gated Agents

Funded prototype action path

FactHarbor prepares assessed claims. The acting AI drafts an exact proposal. A gateway outside that model decides release.

FUNDED PROTOTYPE DESIGN
solid path only - not current end-to-end functionality

HOW TO READ THE DIAGRAM

FACTHARBOR + ACTING AI

Before a request, FactHarbor retrieves public sources, assesses fixed German and English claims, and prepares the evidence bundle. For a covered request, the acting AI uses selected assessments to draft or redraft the exact answer proposal. It cannot decide release.

GATEWAY, STOP AND DECLINE

The gateway outside the acting model checks authority, admissibility, evidence and the exact draft. Any failed check means STOP: no release. Only if the unsupported part can be removed safely may the gateway escalate to a person. NARROW returns to the acting AI for a fresh proposal; DECLINE keeps the current proposal stopped.

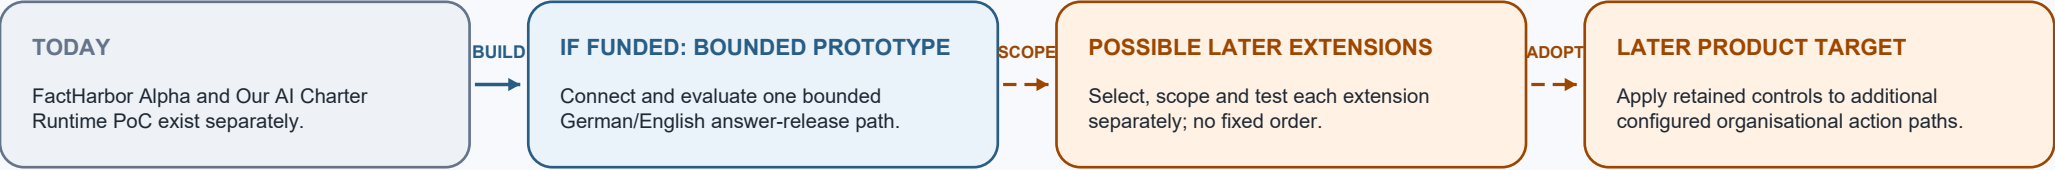

RELEASE, RECEIPT AND RECHECK

Only the executing service can deliver the exact proposal after Commit. The recipient's receipt links the answer to its authority, basis, decision and outcome. A narrowed proposal is new: it returns to the acting AI, restarts at Authorize and reruns all four checks. No approval carries forward.

From a bounded prototype to a later product

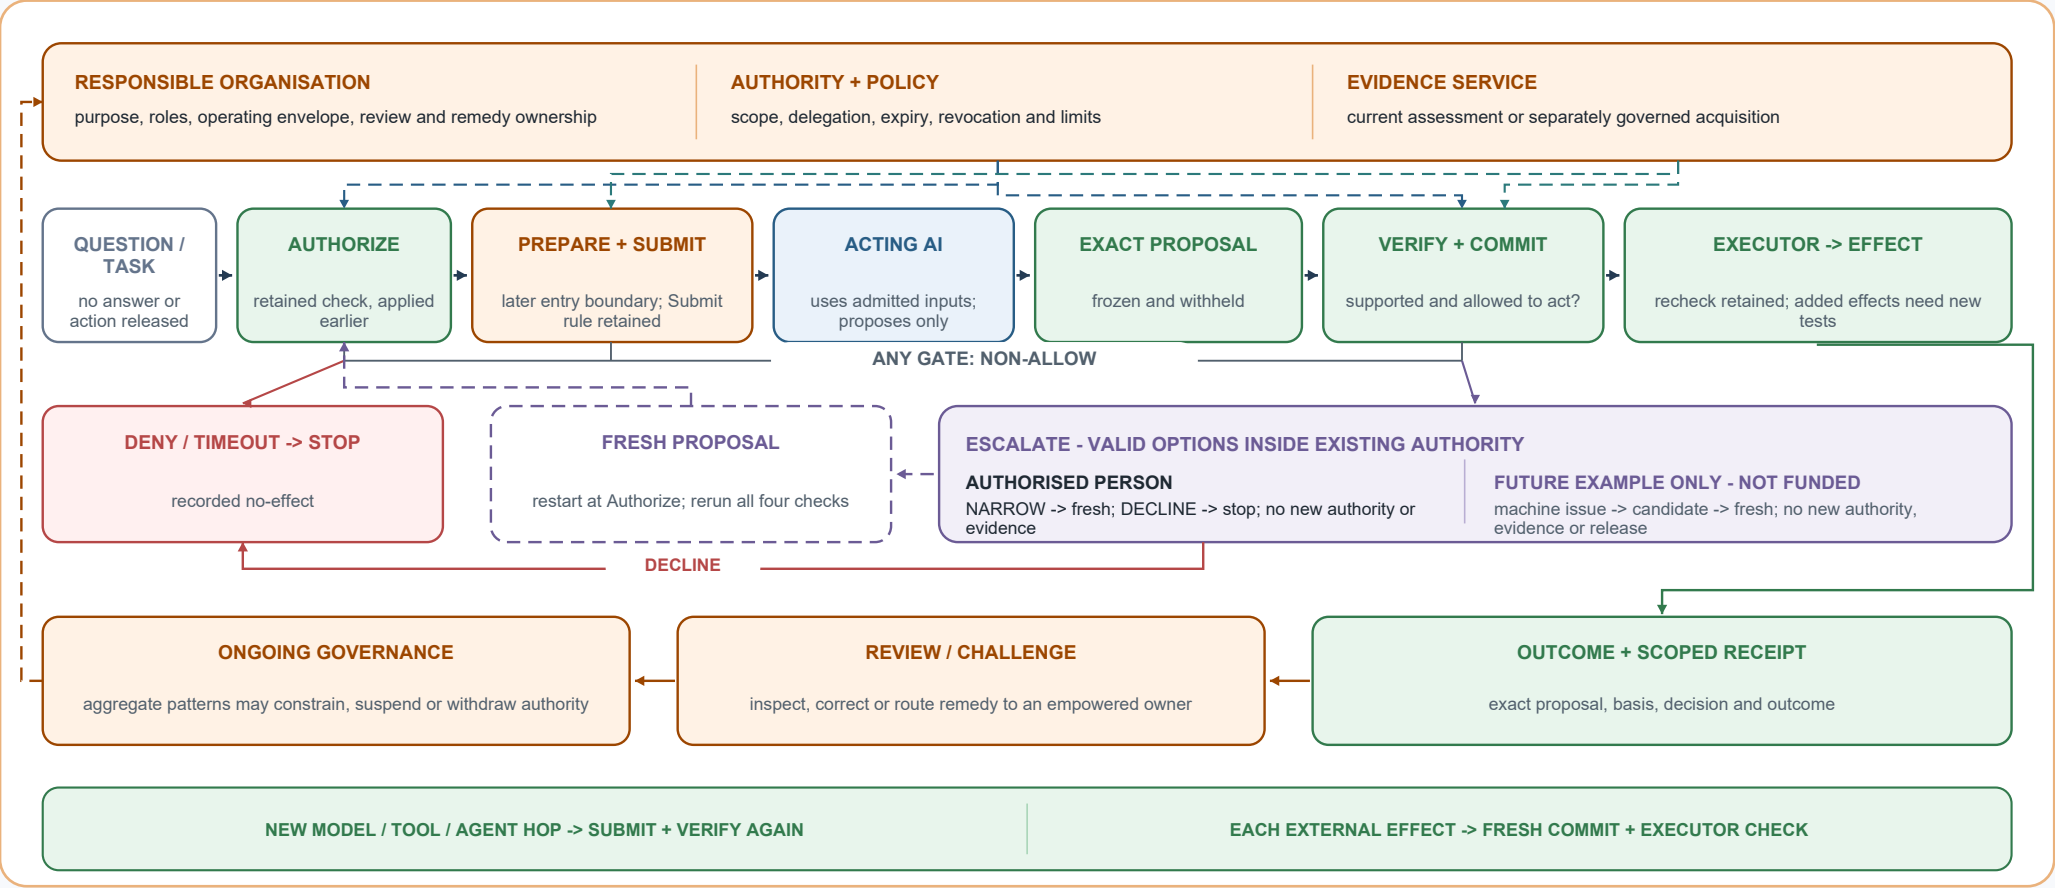

If funded, the prototype would test a control contract that a later product could retain while broadening its coverage.

CAPABILITY EVOLUTION
possible direction - not a committed roadmap

POSSIBLE LATER PRODUCT - FULL OPERATING PICTURE

NOT FUNDED

SCOPE BOUNDARY Each later extension needs its own scope, implementation and evidence that it works.
None is a four-month commitment or part of a fixed delivery order.
